

Industrial Landscapes

In Industrial Landscapes, musicians of ELECTRA emphasize and unite their individual powers, both as ensemble players and as soloists. The ensemble pieces are written for ELECTRA, and the solo works are specially arranged or composed for each of them. Each of the pieces is a dramatic performance incorporating distortion, electronics, pure metal installation (scaffolding) and the fragility and strength of human voice versus mechanism and industry. An installation - connected to the performed music - and the projection of literature, slogans & quotes will guide the public through the show.
